

The Path to Production

GBN:TSX.V

The La Ronge Gold Belt has strong traditions.

We know—we've been working there since 1994. We're working with our northern neighbours—the Kitsaki Management Limited Partnership and the Lac La Ronge Indian Band—to continue further down the path of restarting gold production in this area.

The Jolu Central Mill Gold Project will allow for the economical processing of ore from four gold deposits. Proposals have been submitted, environmental guidelines are being prepared.

We're Golden Band Resources, and together with our northern partners, we're on the path to production.

Golden Band Resources is a well-financed Saskatchewan-based company whose focus is the long-term, systematic exploration and development of its 100% owned La Ronge Gold Belt properties. A positive Preliminary Economic Assessment was received in April, 2007 and is available on our Web site.

Investing in the future

The La Ronge Gold Belt has attracted investment for resource exploration and production since the 1930s. But Golden Band Resources (TSXV & GBN), a Saskatchewan-based mineral company, has a long-term focus and a long-term interest in the area.

Since 1994, Golden Band has assembled through staking and acquisition a land package of more than 750km², including 10 known gold deposits, four former producing gold mines, and a licensed gold mill. The company continues to invest in its two-pronged strategy of exploration and development, adding new prospects, further delineating knowledge of current gold resources, as well as proceeding down a path to production.

Golden Band's measured and indicated gold resources now total more than 734,000 ounces and additional resource estimates compliant with the NI 43-101 standard are expected for a number of projects in the next few months.

The company's near term plans are for the development of the Bingo deposit as an underground mine. Two additional projects will be developed as open pit mines with all of the ore processed at the company's 100% owned Jolu mill. A positive scoping study has been received that examined the potential of these three properties and

is now being further expanded to include an additional fourth property from the Greater Waddy Lake area. Based on these activities, Golden Band anticipates the receipt of development permits in 2008 and start-up of production in early 2009.

Golden Band has an experienced management team and board of directors that have been instrumental in the discovery and operation of several mines and properties. Everyone from the management team to the front line is committed to being a good partner and neighbour today and in the future. The Company has developed strong working relationships with the Lac la Ronge Indian Band and with its economic development arm, Kitsaki Management Limited Partnership. Through a Memorandum of Understanding, both the Lac la Ronge Indian Band and Golden Band outlined their intentions and relationship, agreeing to work together to ensure the advancement of exploration and mining occurs in ways that are mutually beneficial.

Golden Band Resources is investing in exploration and development, but is also investing in the future of northern Saskatchewan.
